# My Photo Bucket Homework

Goal

In this lab you will be adding authentication and authorization to your previous Photo Bucket homework. In the same way that we had Movie Quotes, then **My** Movie Quotes in the Follow Alongs. This homework is the **My** Photo Bucket to the Photo Bucket homework. Only one minor change from what you might guess. For authentication you need to support BOTH **Rosefire** and the **Firebase Auth UI**. So your login screen should look like this…

Otherwise the requirements are all as you would expect. Example screenshots:

List page

| List page with left side nav | Options to show all or only my photos | Showing only my photos |

Note, that the uid is a crazy auto-id if you use any option other than Rosefire for example:

Detail page:

A photo you made	Again you can only edit the caption	Can't edit photos that were added by someone else

When you finish this homework, you will deploy it over your old Photo Bucket url which is probably **yourusername-photobucket.web.app**. Once it is deployed, submit the url and a .zip to Moodle.
